Ch 35 : Glencoe Biology Chapter 37: The Immune System

The immune system is important for defense against a variety of organic insults, and is necessary for the well-being and even survival of host organisms. However, the immune system is highly complex, regulated by multistep control processes, and can be influenced by the status of other body systems and functions.

CHAPTER 35 - Organophosphates, Carbamates, and the Immune ...

The immune system is a host defense system comprising many biological structures and processes within an organism that protects against disease.To function properly, an immune system must detect a wide variety of agents, known as pathogens, from viruses to parasitic worms, and distinguish them from the organism's own healthy tissue.In many species, there are two major subsystems of the immune ...
