Linear algebra moves steadily to n vectors in m -dimensional space. We still want combinations of the columns (in the column space). We still get m equations to produce b (one for each row). Those equations may or may not have a solution. They always

File Type PDF

Linear Algebra

Lay 4th Edition

have a least-squares solution. The interplay of columns and rows is the heart of linear algebra.

The fourth equation is $x_4 = -5$, and the other equations do not contain the variable x_4 . The next two steps should be to use the variable x_3 in the third equation to eliminate that variable from the first two equations. In matrix notation, that means to replace R_2 by its sum with 3 times R_3 , and then replace R_1 by its sum with -5 times R_3 . 6.
