Written to be equally useful for all engineering disciplines, this text is organized around the concept of control systems theory as it has been developed in the frequency and time domains. It provides coverage of classical control, employing root locus design, frequency and response design using Bode and Nyquist plots.

Throughout the text, the reader applies theory to the design and analysis of control systems. The Thirteenth Edition continues to explore the role of and need for automated and precise control systems in green engineering. Key examples of green engineering, such as wind turbine control and the modeling of a photovoltaic generator to achieve maximum power delivery, are discussed in detail.

The purpose of this paper is to review analytical conceptualizations of management control systems (MCS) that have been developed in the academic literature. By means of a systematic review (Tranfield et al. in Br. J. Manag. 14: 207-222, 2003), a comprehensive analysis that encompasses both textbook approaches and research papers is provided.
